ABSTRACT:

PURPOSE: To take a perfect countermeasure against electromagnetic wave interference by preventing radiation of noise in the direction of thickness of a printed board thereby enhancing the shielding effect of the printed board unit.

CONSTITUTION: A through hole 5 connected with a ground layer is made along the fringe of a printed board and a pattern connected therewith or a pad 7 for a capacitor connected with the through hole 5 is provided. This structure can shield noise radiated from the direction of thickness of the printed board. Consequently, radiation of noise from the printed board can be reduced and the countermeasure against electromagnetic interference wave can be taken more perfectly.
